

Silicone

Lights, colours, transparencies.

When chemistry meets design

Giat is a chemical industry, always fascinated by the challenge of bringing its products into the design and fashion sectors.

For this reason since two years Giat is taking part into young designers' and well known brands' projects, bringing its technical competencies and know how together with its own quality and attention to details.

Giat is the ideal partner both for the design and the realization of new projects involving silicon rubbers. Thanks to our cooperation with LuceDentro we are able to offer not just high quality products but also special compounds, containing phosphorescent and photo luminescent pigments, metals or precious materials.

Thanks to its chemical specifications, silicon is perfect to play with colors, transparencies and lights, and it is ideal to create fashion products, furnishings, accessories, and city planning projects.

Firefly, Giat 2006

Giat has been working in the home appliances sector for over fifty years, where it has gained great experience working with famous brands. In recent years we approached design to explore new ways to use silicone as main material and create products that have a complete different touch and feeling experience. In one of the most successful projects, commissioned by a famous kitchen brand, Giat employed photoluminescent edge covers to make it easy for users to access the kitchen at night. Among other project, related to the kitchen, Giat is working on there are: colored and thermocromatic hobs, colored oven door gaskets and LED oven door gaskets that perfectly light up the oven.

Mosaico Opus One, Lucedentro in cooperation with Giat

In bathroom design Giat has started a fascinating project, taking advantages from the expertise of Lucedentro, a specialist in photoluminescent pigments, to create evocative bath environments. Giat has also worked for some well-known brands, such as Agape and Mamoli, for the creation of special faucets, combining silicon's technical features with rubber versatility.

Garden, Giat for Pomellato, 2009

Using fantasy and colors to build charming environments is what Giat has experimented. With Pomellato we used fantasy and colors to build a charming environment for all its showrooms worldwide: using irregular green stripes of silicone, Giat created a surreal grass like ceiling. Giat is also working at products' design together with Lucedentro, to create accessories and furnishings. Silicone is suitable for very different design applications, just for the possibility to mix it with photoluminescent or thermocromatic materials, or even to make it precious with metal inserts.
